

## PROCESS PROTECTION SYSTEMS

In today's environment, more and more plant control systems are required to maintain conformance with stringent Australian and International standards with respect to Safety and Process Protection Systems. Insurance companies are also demanding ever increasing audit requirements and strict compliance with safety standards.

**PROVECTA** is able to offer services to clients to assist in the management of their responsibilities when it comes to critical plant process protection systems. **PROVECTA's** staff have many years experience with critical process protection systems, and through this experience can offer the following services;

- Engineering Audits
- Fail safe control system designs
- Boiler protection studies
- Turbine water ingress protection audits
- Plant Surveys
- Tripping diagrams
- Independent advice regarding contractual performance or conformance.

Please contact Mr. Brad Chin on the contact details below to discuss further where **PROVECTA** can assist with your process protection system.
