

MANAGEMENT INFORMATION SYSTEMS

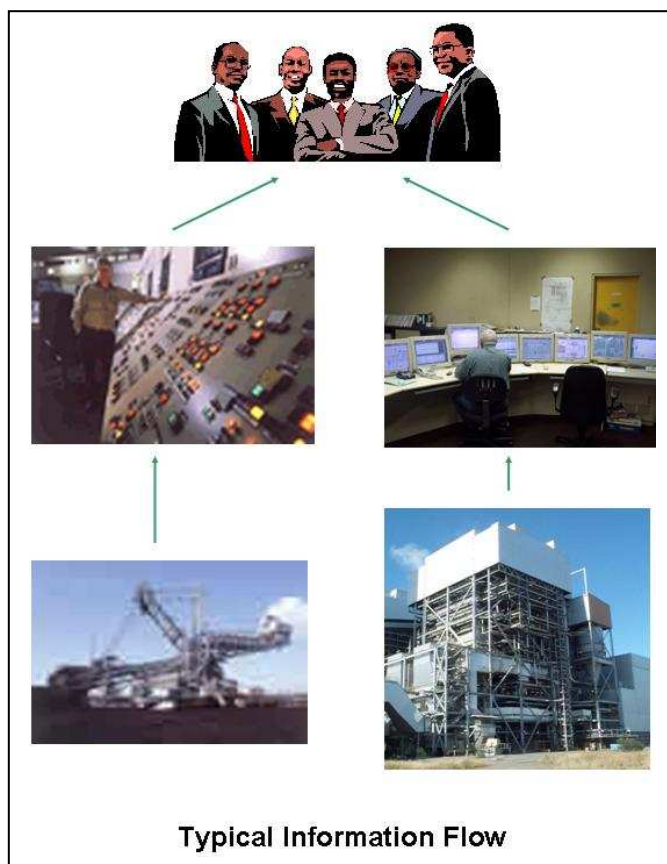

In today's environment, intimate knowledge of your real time and historical plant status and performance is the critical factor in determining if your operation is market leading and profitable or uncompetitive and marginal. The ability to make timely and informed managerial decisions can significantly improve the efficiency and viability of your plant.

PROVECTA has highly skilled professional staff experienced in all aspects of the provision of management information systems interfaced directly to your process control equipment. These management information systems can provide operators with the advanced knowledge current plant performance, whilst also providing managerial and operations staff with the information to make the key decisions on production and operation strategies in the current market environment.

These advanced information systems can provide;

- Increased efficiencies
- Conditioning monitoring
- Reduced outage times
- Market forecasting
- Problem identification

As a certified Citect system integrator, **PROVECTA's** staff have experience with the Citect Plant2Business product. Our staff also have experience in other proprietary information systems including SRAT, FactoryLink, RSView, and many others. In addition to these proprietary systems, our staff have the skills and expertise to customise a plant information system to suit both your organisational IT infrastructure and process control systems.

Please contact Mr. Ron Mastus on the contact details below to discuss further where **PROVECTA** can add value to your management information systems.
